

Releases 2020

Release 1.33 - 18.12.2020

ISSUING API

Added

- New endpoint `GET /v1/api/cards/{ppan}/card-data4` allows to retrieve sensitive card data information for a card.

Changed

- Company Name on the card and contact fields can be indicated for new cardholder in `businessClient` card order request.
- Changes in `POST /v1/api/cards/order` endpoint for `zipCode` field length is up to 15 characters.

Release 1.32 - 27.10.2020

ISSUING API

Added

- New endpoint `GET /v1/api/tokens/{ppan}` allows to receive all tokens associated with a card.
- New endpoint `GET /v1/api/tokens/{ppan}/pan-reference-data` allows to retrieve pan reference identifier associated with a card.
- New endpoint `GET /v1/api/tokens/{ppan}/token-reference-data` allows to receive all token reference data associated with a card.
- New endpoint `PATCH /v1/api/tokens/{ppan}/tokens/{tokenNumber}/state` allows to change the status of token.
- New endpoint `GET /v1/api/cards/{ppan}/card-data3` allows to retrieve sensitive card data information for a card.
- New endpoint `GET /v1/api/cards/{ppan}/otp-secret` allows to receive OTP secret value. OTP secret can be passed for the authorisation in `card-data3` endpoint to the sensitive card data.

Release 1.31 - 23.10.2020

ISSUING API

Fixed

- Minor performance improvements and under-the-hood fixes.

Release 1.30 - 07.10.2020

ISSUING API

Added

- New endpoint `GET /v1/api/clients` has been added. Returns a list of clients and their information. Clients are ordered in descending order by their creation date, with the most recently created client appearing first. Filters are available.
- New endpoint `GET /v1/api/clients/{clientId}` has been added. Allows you to retrieve a particular client's information. `id` field is added to `Cardholder` model to allow supplementary card ordering for existing clients.
- Added `address` object to `Cardholder` model. Allows you to order private supplementary and any business cards to new clients.
- New priority field has been added `CardPreferences` model.
- New design field has been added `CardPreferences` model. Use it to order plastic cards with a specific design.
- New transaction type `FORCE_WITHDRAWAL` added to 'Process card transaction' function.

Release 1.21 - 02.06.2020

ISSUING API

Added

- New endpoint `POST /v1/api/cards/{ppan}/replace` has been added. Now you can order a card replacement in case an existing card is lost or compromised in any other way.
- Special endpoint `GET /v1/api/cards/{ppan}/pan_cvv` is introduced to enable PAN and CVV sending to the cardholders of virtual cards.

Fixed

- We have corrected the situation when the math symbol in front of some hold types was previously displayed incorrectly during the first 10 minutes after creation.

Release 1.20 - 12.05.2020

ISSUING API

Added

- New `userDefinedField1` field is added to `PrivateClient` and `Cardholder`

Fixed

- 500 http response code answers of `POST Transactions` in case of insufficient funds has been changed to 400 and supplied with "Insufficient funds" message
- 500 http response code answer of `Update Card State` operation has been changed to 400 when card state can't be changed due the card is in final state
