

## Releases 2022

### Release 2.1 - 19.12.2022

ISSUING API

#### Changed

- API endpoint `POST /v1/api/cards/order` update: Increased Design ID validation length up to 10 symbols. Allows to register card order with different Design ID that should be used in Mastercard payment card tokenization.

#### Added

- API endpoint: `POST /v1/api/cards/order-gift-card` . Allows to order many gift cards in one card order. Subject to DAPI user role restrictions.
- API endpoint: `GET /v1/api/accounts/{cardAccount}/transactions-queue` . The request allows users to receive list of current card account transactions which are enqueued for processing.

### Release 2.0 - 09.06.2022

ISSUING API

#### Changed

- API endpoint `POST /v1/api/cards/order` has a new parameter `range_id` under CardOrder section CardPreferences as an optional field. It allows DAPI user to order card under card product with a specific BIN range if the card product is configured with different BIN ranges.

#### Fixed

- Fixed current card status logic for expired cards. If the card hasn't been blocked and the card has expired DAPI user will get blocked card with `SYSTEM_BLOCK`

### Release 1.39 - 07.02.2022

ISSUING API

#### Changed

- The endpoint `PATCH /v1/api/cards/{ppan}/delivery-address` allows updating also the shipment method. Phone number is still not possible to update using this endpoint.
