Releases 2026

Release 1.27. - 23.10.2026 ACQUIRING SOAP

Added

- Introduced Samsung Pay tokenized payments.
- New optional data field client_type for Mastercard P2P, Account to Account and Funds Transfer scenarios.
- New optional data field recipient_type for Mastercard P2P, B2P, OG and SDWO payout scenarios.
- Mastercard assigned new AAV leading indicator kD and repurposed AAV leading indicator kV.
- Information about the supported Visa BAI and Mastercard TTI values for AFT and OCT transactions.
- Original_rtid detail in Recurring payment specific details.

Updated

- RECO operation timing recommendation for business day closure.
- Mapping of MDpay MPI mdStatus for Visa cards.
- In the Authorisation response codes table, code 164 Decline, Fraud/Security violation is mapped to Response code (Visa) 83.

Deprecated

- Apple Pay purchase scenarios are deprecated, standard SMS and DMS scenarios should be used.

Release 2.23. - 07.10.2026 ISSUING API

Fixed

- Internal technical improvements.

Release 2.22. – 09.09.2026 ISSUING API

Added

- New object rules to the Limit schema to support rules limits.

- New Card limit - **SL_LIMITOS000001000000000000001 - Single spending geo switch.**

Deprecated Endpoint

The following `v1` endpoints have been marked as **Deprecated** in API SPACE and should no longer be used:

- `GET /v1/api/clients` Get client list

Release 1.26. - 22.07.2026 ACQUIRING SOAP

Added

- New optional original_rtid detail introduced for Mastercard refund transactions.
- Optional hr_asset detail added to support Recurring payment execution.

Updated

- Network tokenized payment (VTS, MDES) support introduced.
- Support for Account verification initiated with a Visa token.

Release 2.21. - 17.06.2026 ISSUING API

Added

- New endpoint `GET /v2/api/clients`. This request allows users to retrieve clients' details filtered by specific parameters. This endpoint will replace v1 endpoint Get clients list, which will be deprecated starting with 2.22 release.
- New endpoint `GET /v2/api/trustlist/{ppan}` This request allows users to retrieve the current list of trusted merchants for a specific card.
- New endpoint `POST /v2/api/trustlist/{ppan}` This request allows users to add a specific merchant to trusted merchants list for a specific card.
- New endpoint `POST /v2/api/trustlist/{ppan}/remove` This request allows users to remove a specific merchant from the trusted merchants list for a specific card.

Deprecated Endpoints

The following `v1` endpoints have been marked as **Deprecated** in API SPACE and should no longer be used:

- `GET /v1/api/cards/{ppan}` Get card information
- `GET /v1/api/clients/{clientId}` Search client by ID

Release 2.20. - 06.05.2026 ISSUING API

Added

- New endpoint `GET /v2/api/cards/{ppan}` This request allows users to get card information with available balance. This endpoint will replace existing v1 Get Card Information, which will be deprecated starting from 2.21. release.
- New endpoint `GET /v2/api/clients/{clientID}` The request allows users to receive clients data by using a specific client ID number. This endpoint will replace existing v1 Search client by ID, which will be deprecated starting from 2.21. release.
- Improved API SPACE documentation for the **Order Card** and **Create Card V2** endpoints to clearly indicate which field data is not stored in the database.

Deprecated Endpoint

- `POST /v1/api/cards/card-data1` Get sensitive card information 1

Release 1.25. - 17.04.2026 ACQUIRING SOAP

Updated

- QCash payments improved in line with Mastercard requirements
- Mandated usage of `payment_purpose` data field for OCT and AFT transactions to/from Visa cards issued in Saudi Arabia
- Payment detail usage for Tokenized wallet payments
- Mastercard authorisation downgrade section
- Information about Mastercard TLID
- Field length and format for payouts (OCT) and fundings (AFT)

Changed

- In OCT AA payment specific detail section to support new Visa BAI 'LA' for OCT transactions as well to support cryptocurrency as transaction purpose for Mastercard payouts

Added

- Tokenized Click To Pay payment support introduced

Release 2.19. - 25.03.2026 ISSUING API

Added

- New endpoint `GET /v2/api/cards/{ppan}/card-data7` This request allows users to retrieve sensitive card information, such as the PIN code for a specific PPAN in encrypted format. This endpoint will replace the existing Get Sensitive Information 1 endpoint, which will be deprecated starting from 2.20. release.
- New endpoint `GET /v2/api/accounts/{cardAccount}` The request allows users to retrieve detailed information about a specific client's account, including its current balance, status and currency.
- New endpoint `POST /v2/api/accounts/{cardAccount}/state` The request allows users to manage the transition of the card account from an active state to permanent closure.

Release 2.18. - 11.02.2026 ISSUING API

Added

- New endpoint `POST /v2/api/cards/{ppan}/duplicate` The request allows users to duplicate a virtual card to create a physical card while retaining the same card details for eligible card products.
- New endpoint `GET /v2/api/limits/{ppan}/used` The request allows users to get used values for the corresponding limit on the card.
